H 1000

SPECIFICATIONS

The **H 1000** production horizontal machining centre is utilizable for the whole range of technologies from the power up to the high-speed machining.

- outstanding characteristic of damping and absorption of mechanical vibrations
- maximum rigidity and maximum value of natural frequencies of movable parts
- machine dynamical and thermal stability necessary for the modern progressive technology of machining
- machine modern design – linear guideways in all axes and ecological grease lubrication of guideways and ball screws

The machine conception includes the T-shape bed with slidable column (X-axis) along which moves the spindle head in the vertical direction (Y-axis). The movement in the Z-axis is carried out by the rotary table (B-axis) with a workpiece.
